Industrial Cyber Security as a Service

IndustryTrust Cyber Security Services are our answer to the dramatically evolving global threat landscape for all networked systems and devices. Today's on-premises solutions designed for exclusive use in customer environments are expensive to operate, difficult to keep up to date, and hard to scale.

IndustryTrust is a modern, highly available and extremely scalable cloud-based solution that can be made available as a service anywhere within a few days. All collected data is analyzed on-site in real-time using artificial intelligence (AI), and security incidents are detected and alerted. Even without an existing connection to the cloud - this 'Always-On' functionality is provided only by IndustryTrust. This unique architecture enables low-cost, highly effective and fail-safe operation. By using native cloud technologies, we are also able to react very quickly to a changing threat scenario. Allowing us to protect all IndustryTrust customers more effectively and faster in comparison to what is technically possible with traditional appliance solutions.

All collected and processed data is transferred protected against manipulation and securely stored and archived beyond the applicable legal requirements. All data is physically located in a high-security data center in Germany.

Now and without Risk

The montly service invoices are based on the volume of data. IndustryTrust scales automatically, to always adapt to your business situation.

With IndustryTrust there is no vendor lock-in and no risk - our mission is your security!

Let us assess the perfect scope of IndustryTrust Services for your infrastructure and provide you with a proposal.
